DETAILED ACTION

Election/Restrictions

Applicant's election without traverse of figs. 1-2, claims 1-10 in Paper No. 6 is acknowledged.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Claims 1-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Shih in view of Ozeki et al. The patent to Shih teaches structure substantially as claimed including means for producing an additional force not emanating from the drive unit of the lift cage the only difference being that the lift system does not include conventional cable and counterweight structure. However, the patent to Ozeki et al teaches the use of cable pulleys and counterweights in drive systems for lift cages. It would have been obvious at the time of the invention to modify the structure of Shih to

include a conventional drive systems comprising cables and counterweights, as taught by Ozeki et al since such structures are conventional structures used in the same well known purposes thereby providing structure as claimed. The method of use would have been obvious of the structures.

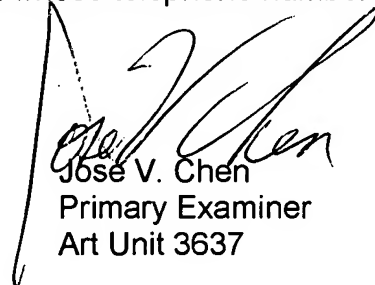

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The patents to Bell, Willis, Rover, Fargo et al, Wang, Bammert, Bolch et al, Chen, 4-7284 teach structure similar to applicant's.
